

Thanks to Michael from ukcampsite.co.uk for sending this, an excellent idea!

Alarm caravan to house.

I found this article in the 2001 Practical caravan magazine.

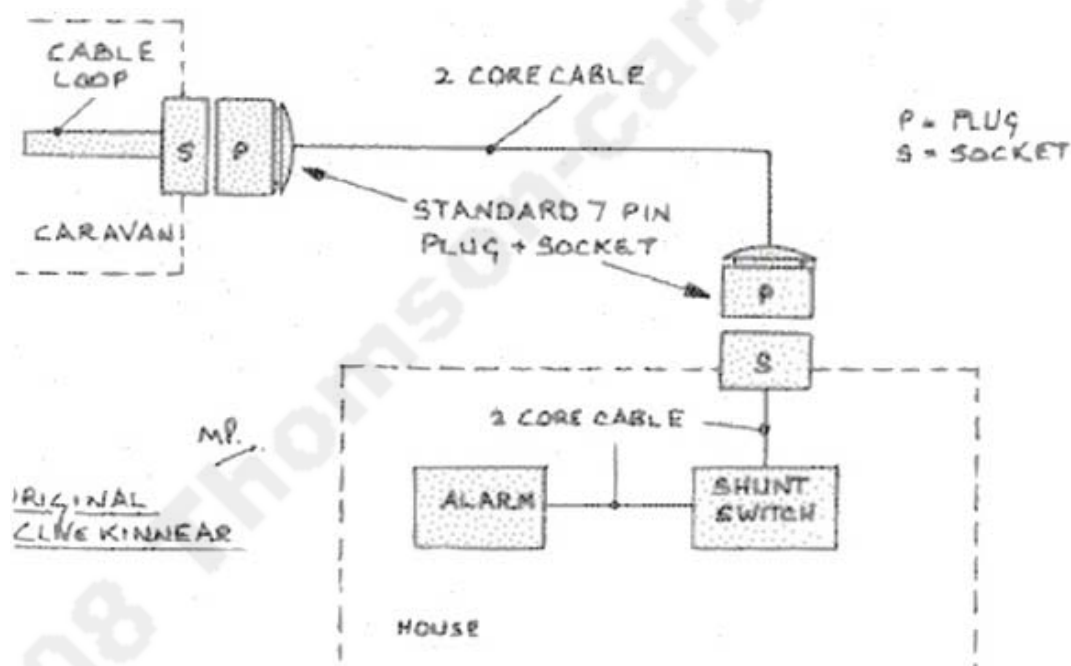

If you store your caravan at home you could connect it to your house alarm.

The diagram below shows a schematic of the wiring.

A standard 7 pin plug and socket arrangement is used between the caravan and the house.

As alarm systems work on the principal of a closed circuit the alarm will operate should either plug be removed, or if the cable is cut. A shunt switch between the house socket and the alarm panel allows you to by-pass the circuit.

Most alarms in the house have many zones; the alarm number does not need to be the same as the house one.
